Solve compound inequalities in the form of $a < x < b$ and express the solution graphically. The solution of a compound inequality that consists of two inequalities joined with the word and is the intersection of the solutions of each inequality. In other words, both statements must be true at the same time.

Chapter 3 - Solving Inequalities - 3-6 Compound Inequalities - Practice and Problem-Solving Exercises - Page 204: 9. Answer. $-5<x<7$. Work Step by Step. If x is between -5 and 7 , then x must be greater than -5 and less than 7 . The phrase between does not imply that the endpoints are part of the solution set, so the endpoints on the number line are open circles, and the inequality operators do not include "or equal to."

Let's take a closer look at a compound inequality that uses or to combine two inequalities. For example, $x > 6$ or $x < 2$. The solution to this compound inequality is all the values of x in which x is either greater than 6 or x is less than 2 . You can show this graphically by putting the graphs of each inequality together on the same number line.. The graph has an open circle on 6 and a blue ...

Example 3. Solve for x : $-12 \leq 2x + 6 \leq 8$. Since this compound inequality has no connecting word written, it is understood to be "and." It is translated into the following compound sentence. $-9 \leq x$ indicates all the numbers to the right of and including -9 , and $x \leq 1$ indicates all the numbers to the left of and including 1 ...

Compound Inequalities is a method to find the variable value for the given compound inequalities. The two inequalities would be joined by the word 'and' or 'or'. It is presented in a number line. When the arrow points away from each other in the number line, then the inequalities are joined by 'and', if arrow points on same direction ...
