without any special character or HTML tags. Nested conditional logic.

Models | Django documentation | Django

For example, you can control the size of a Text field by setting its Field Size property. For Number and Currency fields, the Field Size property is especially important, because it determines the range of field values. For example, a one-bit Number field can store only integers ranging from 0 to 255.

I want to display on a form fields from various tables and I have the foreign IDs in one table. I am going to use text boxes and combos. I dont care if I must use VBA to accomplish it. - Nick Dandoulakis Jun 1 '09 at 12:51

A Foreign Field Text Only

Field types¶. Each field in your model should be an instance of the appropriate Field class. Django uses the field class types to determine a few things: The column type, which tells the database what kind of data to store (e.g. INTEGER, VARCHAR, TEXT). The default HTML widget to use when rendering a form field (e.g. <input type="text">, <select>); The minimal validation requirements, used ...
