Recorded on Thursday, September 10, 2020. Join Dr. Marcia Zucker, chairholder of CLSI's new revision of CLSI POCT14—Point-of-Care Coagulation Testing and Anticoagulation Monitoring, 2nd edition, as she provides an overview of the new revision, including what's new and what you need to know about this important topic. At the end of this webinar, participants will be able to:

Recent guidelines and recommendations for laboratory ...

The effect of fill volume on coagulation results also depends on the reagent used for testing, size of the evacuated collection tube, and citrate concentration. A minimum of 90% fill is recommended; testing on samples with less than 90% fill should be validated by the laboratory. Evidence of Compliance:

The International Society on Haemostasis and Thrombosis (ISTH) and the British Committee for Standards in Haematology (BCSH) have recently updated their lupus anticoagulant (LA) detection guidelines. The Clinical and Laboratory Standards Institute (CLSI) subsequently will publish its first LA guideline. General agreement exists on issues such as sample preparation, the use of dilute Russell viper venom time (dRVVT) in diagnostic repertoires, the use of normalized ratios, calculations to ...

CLSI H48-Ed2 - Determination of Coagulation Factor ...

The guideline is appropriate for use by laboratories of all sizes and discusses the areas of chemistry, immunochemistry, hematology, coagulation, toxicology, and molecular diagnostics. The information is applicable not just to hospital laboratories but to all settings where laboratory blood specimens are collected and processed, Dr. Kiechle emphasizes.

This guideline provides minimal reference to the use of point-of-care coagulation testing for monitoring direct thrombin inhibitors. Potential assay interferences, including direct oral anticoagulants, are briefly discussed. The intended users of this guideline are manufacturers, regulatory organizations, and health care professionals.

The guideline provides procedures for the collection, transport, and processing of blood specimens for plasma-based and molecular coagulation testing. Tests of the coagulation system are very sensitive to storage (time and temperature), concentration of anticoagulant, and surface of containers; attention to these parameters is important. H21-A5 is primarily directed toward laboratory and/or clinical personnel responsible for obtaining patient specimens and preparing samples for plasma-based ...

H57AE: Evaluation & Implementation of Coagulometers

If the patient has a known hematocrit above 55%, adjust the amount of anticoagulant in the collection tube before drawing the blood according to the CLSI (formerly NCCLS) guidelines below: To avoid contaminating the sample with tissue thromboplastin or heparin, follow the guidelines below. These substances may alter results.

The CLSI and WHO guidelines recommend use of 109 mmol/L citrate as the

anticoagulant of choice for coagulation laboratory tests (1). Incomplete filling of blood collection tubes to <80% of the nominal volume produces statistically significant errors in PT assays when the tubes contain 129 mmol/L (3.8%) sodium citrate.
