## **Orientation and setup | Docker Documentation**

Destroy your container and start a new one up with the new environment variable using `docker run -e ...`. It's identical to changing an environment variable on a running process, you stop it and restart with a new value passed in. Replace the concept of restarting a process with destroying and recreating a new container.

One of the most important aspects of container

Download File PDF Docker Containers Includes Content Update Program Build And Deploy With Kubernetes, Flannel, Cockpit And Atomic Build And Deploy With Kubernetes, Flannel, Cockpit And Atomic

isolation is that each container interacts with its own private filesystem; this filesystem is provided by a Docker image. An image includes everything needed to run an application - the code or binary, runtimes, dependencies, and any other filesystem objects required. Containers and virtual machines

## **How can I deal with security updates in my docker containers?**

Most major distributions will frequently release a new base image which includes the latest critical updates and security fixes as necessary. This means that you can simply pull the latest base image to get those fixes and rebuild your image. But also since your containers are using yum, you can leverage yum to control which packages you update.
