### Drencher Systems - HOME | Raft Suppression

Drencher systems, which use nozzles without thermal locks, are actuated either by a sprinkler installed in a trigger air line or by a cable-type thermal lock.

### Different between sprinkler systems and drencher system

LNG is highly flammable, which makes the fire protection system crucial consideration when constructing the vessel. Drencher and High velocity nozzles placed around the LNG tanks to provide sufficient coverage of water to cool the surface of the tanks and their surroundings.

## **Drencher Fire Control System**

A Window Drencher is a fire control system that protects window openings. It is installed horizontally with the same level of the top of the window. Its water head releases water or foam spray and cools down the window when a certain temperature has been reached.

### **DRENCHER\_PANEL - Custom Panel & Controls**

Drenchers are a system of water heads that are used for the fire protection. In contrast to sprinklers which are found internally, drenchers are normally found on the exterior of a building to protect against a fire from a neighbouring building. They tend to be positioned on roofs and over windows and external openings.
