Installation Guide - Fedora Project

Anaconda provides utilities for creating RAID sets during installation; however, these utilities only allow partitions (as opposed to entire disks) to be members of new sets. To use an entire disk for a set, simply create a partition on it spanning the entire disk, and use that partition as the RAID set member.

Knowing that a new installation of Fedora 14 can be installed on less than 2.5 GB of disk space, reducing the size of lv_root to any value above that should be fine. For this example, I have reduced it to 8 GB. 3 GB should be good too. The name of the logical volume will also be changed as suggested in the previous paragraph.
