The crayfish will be processed in a plant in Nanaimo, about 80 km to the north. Initial markets are high-end restaurants in the Victoria and Vancouver areas but their sights are on Europe. “Aquaculture is something new to the Malahat nation,” says Parker.

Kōura | NIWA - NIWA | Climate, Freshwater & Ocean Science

Our freshwater crayfish range from the largest to some of the smallest in existence. The giant Tasmanian crayfish (*Astacopsis gouldii*) grown to 6.3 kg and the Murray River crayfish (*Euastacus armatus*) grows to 2.7 kg. These species and spiny crayfishes in general, are considered to have little aquaculture potential because of their slow growth and low meat yield.

Virtually all crawfish culture also relies on natural reproduction rather than stocking hatchery-reared juveniles. The predominant cultured species in North America, the red swamp (*Procambarus clarkii*) and white river crawfish (*P. zonangulus*), are classified as “temperate” species; that is, they will tolerate cold winter conditions. Both species, however, possess a number of traits that are usually associated with animals that live in warm waters.
