covered with mucus so that the skin can absorb oxygen from the water. The mucus also prevents the frog from drying out when it is out of the water and makes it slippery – helping it escape predators. The frog's skin may be covered in spots, called chromatophores.

write a brief note on reproductive system of frog with diagram

ADVERTISEMENTS: Since the excretory and reproductive systems are closely associated, hence, it is customary to call the two systems together as a urogenital or urinogenital system, though both are unrelated functionally. In frog the sexes are separate. The urinogenital organs can be studied under the following heads: 1. Excretory System: The excretory system in both [...]

Urinogenital System of Frog (With Diagram) | Chordata ...

Reproductive system of frog is responsible for producing gametes which are released in water for fertilisation. Similarities between human and frog's system are limited to the fact that both possess paired testes/ovary for gamete production. In both the sexes of frog, each gonad remains attached to the kidney of same side. In human special ligaments attach the gonads to body wall.
