Geohazards Natural and Human (Loose Leaf Pages) by Nicholas K. Coch, 2004, Prentice Hall edition, Paperback

Geohazards Natural And Human

Think of all the “natural disasters” with which we’re afflicted: tsunamis, earthquakes, volcanoes, storm surges, hurricanes, cyclones, and so on. And note that the impacts of such events are almost always worse if the human population affected is large. Typhoon Haiyan’s severity in 2013 was likely population related because the huge population of Homo sapiens [...]

2018 Long-term National Seismic Hazard Map. Earthquake hazard map showing peak ground accelerations having a 2 percent probability of being exceeded in 50 years, for a firm rock site. The map is based on the most recent USGS models for the conterminous U.S.

Geohazards Engineering & Geology - About Our Team

Biosphere: the part of the earth’s crust, waters and atmosphere that supports life and the ecosystem comprising the entire earth and the living organisms that inhabit it. The intense shaking of the earth’s surface causes damage or loss of human and animal life. Earthquakes themselves do not kill or harm life, it’s when structures or certain flora collapse.

0023229926 - Geohazards: Natural and Human by Coch ...

Landslides, caused by heavy rainfall, flood, earthquake, erosion, and human activities, are the most common geohazards on land. On land and offshore, geological processes, earthquakes and human activities, for instance in connection with offshore petroleum exploration and production, can trigger slides and large mass flows.
