Although fairly frequent in psychiatric in-patient, episodes of aggression/violence are mainly limited to verbal aggression, but the level of general health is significantly lower in nurses who ...

### **Inpatient aggression in community hospitals**

Inpatient psychiatric violence poses a significant risk to patient and staff health. Risk factors offer staff an opportunity to predict and prevent aggression through thorough violence assessments. Pharmacotherapy, isolation, and restraints provide a valuable core of intervention options that will likely never be replaced, but it could be beneficial to begin to view these as more of a last line of defense.

Patients who are younger, male, and have a history of substance use and psychosis diagnoses are more likely to display aggression; however, patient factors are not solely responsible for violence, and there are complex circumstances that lead to aggression. Indeed, patient-staff interactions lead to a sizeable portion of aggression and violence on inpatient units, thus they cannot be viewed without considering other forms of conflict and containment that occur before, during, and after the ...

### **Bing: Inpatient Violence And Aggression A**

A survey of American psychiatry residents indicated that 25% had been physically assaulted by a patient at some point in their training. Rates of threats and physical intimidation reached 86% and 71%, respectively. 1. Providers might anticipate violence in the emergency department or an inpatient setting, but violence can occur anywhere.
