insecticide | Description, Modes of Action, Types ...

Because early winged insects were lacking the sophisticated wing folding mechanism of neopterous insects, they must have lived in the open and not been able to hide or search for food under leaves, in cracks, under rocks and other such confined spaces. In these old forests there weren't many open places where insects with huge structures on their back could have lived without experiencing huge disadvantages.

Introduction to the Psalms, Psalm 1

1 CHAPTER 1 INTRODUCTION 1. The Insects Insects are arthropods, i.e. a type of invertebrate animals that lack backbones. At present, the estimated figure for total living species on earth is 10 million, of which a mere 3% are vertebrates and over 60% are insects. Insects are by far the most diverse group of organisms on earth.
