An easier way to proceed is to first combine two vectors and add the third vector. Let us first consider the linear combinations of vectors u and v . We can easily notice that adding on one line to all on the other line will fill the two-dimensional region between the two vectors. This gives us a plane in.

MANUAL FOR INSTRUCTORS

First, change to by multiplying both sides by negative 1. Next, multiply the first equation by two on both sides to get a common term in both equations, Now you can subtract one equation from the other to get a new equation with ONLY ONE TERM.
