Principles of Evolution Charles Darwin deserves primary credit for the theory of evolution. He developed existing ideas about descent with modification, and he was the first person to perceive

## **Principles of Evolution**

Construct an explanation based on evidence that the process of evolution primarily results from four factors: (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.

## **CHAPTER PRINCIPLES OF EVOLUTION VOCABULARY PRACTICE ...**

Evolution is the process of biological change by which descendants come to differ from their ancestors. This concept had been discussed for more than 100 years when Darwin proposed his theory of how evolution works. Today, evolution is a central theme in all fields of biology. The 1700s were a time of great advances in intellectual thought.

## **Vocabulary Practice Principles Of Evolution Chapter Ten ...**

There were theories of biological and geologic change before Darwin. VOCABULARY evolution fossil gradualism species catastrophism uniformitarianism  
MAIN IDEA: Early scientists proposed ideas about evolution. In a phrase, tell what each scientist did to help develop evolutionary theory. Scientist  
Contribution to Evolutionary Theory

## **CHAPTER 10 Principles of Evolution**

Traces of an organism that existed in the past.

Variation. Difference in the physical traits of an individual from those of other individuals.

Homologous Structure. Features that are similar in structure but appear in different organisms and have different functions. Analogous Structures.
