Alison G. Smith is a plant biochemist focusing on metabolism, particularly involving vitamins and cofactors. Her research group has combined biochemical, molecular biological and genomics approaches to study biosynthetic pathways for haem and chlorophyll, and for vitamins B5 (pantothenate) and B1 (thiamine), in plants, algae and bacteria.

PHYTOREMEDIATION | Annual Review of Plant Biology

Published on behalf of the German Society for Plant Sciences and the Royal Botanical Society of the Netherlands, Plant Biology is an international journal of broad scope bringing together different subdisciplines, such as physiology, molecular biology, cell biology, development, genetics, systematics, ecology, evolution, ecophysiology, plant-microbe interactions, and mycology.

Contaminated soils and waters pose a major environmental and human health problem, which may be partially solved by the emerging phytoremediation technology. This cost-effective plant-based approach to remediation takes advantage of the remarkable ability of plants to concentrate elements and compounds from the environment and to metabolize various molecules in their tissues. Toxic heavy ...

Recent advances in synthetic biology research have been underpinned by an exponential increase in available genomic information and a proliferation of advanced DNA assembly tools. The adoption of plasmid vector assembly standards and parts libraries has greatly enhanced the reproducibility of research and the exchange of parts between different labs and biological systems.

Light affects the movements of stomatal guard cells, opening and closing of stomatal pores in leaves which regulate gas exchange, that is, CO₂ uptake and loss of water vapor by transpiration. This affects CO₂ assimilation and also transpirational cooling of leaves. Temperature has important effects on metabolism.
