## SPOOKY ACTION AT A DISTANCE EXPLAINED SIMPLY - YouTube

Einstein later famously derided entanglement as "spukhafte Fernwirkung" or "spooky action at a distance." The EPR paper generated significant interest among physicists, which inspired much discussion about the foundations of quantum mechanics (perhaps most famously Bohm's interpretation of quantum mechanics), but produced relatively little other published work.

If they are truly entangled, then according to the theory of quantum mechanics their physical properties should be related in such a way that any measurement made on one particle should instantly convey information about any future measurement outcome of the other particle — correlations that Einstein skeptically saw as “spooky action at a distance.”

## **Action at a distance - Wikipedia**

If "action" is defined as a force, physical work or information, then it should be stated clearly that entanglement cannot communicate action between two entangled particles (Einstein's worry about "spooky action at a distance" does not actually violate special relativity). What happens in entanglement is that a measurement on one entangled particle yields a random result, then a later measurement on another particle in the same entangled (shared) quantum state must always yield a value ...
