Lisi is known for "An Exceptionally Simple Theory of Everything," a paper proposing a unified field theory based on the E_8 Lie group, combining particle physics with Einstein's theory of gravitation. The theory is incomplete and has unresolved problems. The theory has been extensively criticized in the scientific community.

[0711.0770] An Exceptionally Simple Theory of Everything

"An Exceptionally Simple Theory of Everything" is a physics preprint proposing a basis for a unified field theory, often referred to as "E8 Theory", which attempts to describe all known fundamental interactions in physics and to stand as a possible theory of everything. The paper was posted to the physics arXiv by Antony Garrett Lisi on November 6, 2007, and was not submitted to a peer-reviewed scientific journal. The title is a pun on the algebra used, the Lie algebra of the largest "simple", "

Antony Garrett Lisi - Wikipedia

It is with this knowledge that A. Garrett Lisi submits his theory of everything to the world -- his "Exceptionally Simple Theory of Everything." Newtonian physics describes why a rolling ball eventually stops. Relativity explains why you don't fly right off the spinning Earth and into space.

Title: An Exceptionally Simple Theory of Everything. An Exceptionally Simple Theory of Everything. All fields of the standard model and gravity are unified as an E8 principal bundle connection. A non-compact real form of the E8 Lie algebra has G2 and F4 subalgebras which break down to strong su (3), electroweak su (2) x u (1), gravitational so (3,1), the frame-Higgs, and three generations of fermions related by triality.

General relativity, a theory of gravity built from pure geometry, is exceedingly elegant and effective in its domain of applicability. Any attempt to describe nature at the foundational level must reproduce these successful theories, and the most sensible course towards uni ca-

The goal is to present the fundamental concepts of representation theory, to describe the connection between them, and to explain some of their background. The focus is on groups which are of particular interest for applications in physics and number theory (e.g. Gell-Mann's eightfold way and theta functions, automorphic forms).

An Exceptionally Simple Theory of Industrialization. An Exceptionally Simple Theory of Industrialization. Ahmed S. Rahman Department of Economics, United States Naval Academy 589 McNair Road Annapolis, Maryland 21402 rahman@usna.edu December 2009. Abstract Historically, industrialization has been associated with falling relative returns to skills. This fact is at odds with most theories of industrialization, which tend to imply rising skill premia as natural concomitants to economic growth.

The paper's title is a pun on the mathematical nomenclature; E8 is an "exceptional" "simple" group, simple meaning that it lacks a certain type of internal structure, and exceptional meaning that it's one of a handful of simple groups which fall outside the infinite families to which all the others belong. I suppose it's also a reference to the unified theories of recent decades; Lisi wants to do without unverified innovations like supersymmetry and extra dimensions.
