Eat fish that are low on the food chain. Fish farming can ease pressure on marine ecosystems if farmed fish don't need large amounts of wild fish in their diets. Consumers should therefore demand species that feed low on the food chain—"low-trophic" species such as tilapia, catfish, carp, and bivalve mollusks.

### **FISH FARMING BUSINESS PLAN**

Fertilizer may be used to increase fertility & thus fish production. Semi-intensive fish farming needs a moderate level of inputs. Fish production is increased by the use of fertilizer and supplementary feeding. This means higher labor and feed costs, but higher fish yields generally more than compensate for this.
