Weak D Case Study - API Paperless Proficiency Testing

The weak D (formerly D_u) phenotype describes an individual with a variant RHD allele, leading to low expression of complete D antigen on the surface of their red blood cells. The partial D phenotype describes a variant RHD allele that results in modification of the surface D antigen and can result in the loss of D epitope.

Antibody Identification Case Studies

Weak D Case Study (cont.) The expression of the D antigen is altered in an estimated 1-2% of individuals of European ethnicity, higher in individuals of African ethnicity. There are two forms of the altered D antigen; Weak D and Partial D. Weak D Weak D expression is a result of mutations in the internal, or transmembrane, portions of the RhD
